Puffin Facts 7: When to watch Puffins

Puffins can be seen on Burhou from mid/late March to the end of July.

Look for them billing and collecting nesting material from mid April.

Look for adults bringing fish to the burrows for the chicks throughout June.

Look for Pufflings fledging in late July.

Puffins fish during the day so the colony will be busiest early morning as they go to feed, or in the evening as they return with their catch.

Pufflings are most likely to fledge late evening or at night when the Gulls are less active.
