

Explore the relationship between living things and their natural environment.

Activity

Complete the table

Can you pick out which living thing in the food chain is the:

Prey

Predator

Carnivore

Omnivore

Herbivore

Producer

Consumers

Activity

What happens if a link in the food web dies out or changes?

Give the children a different living thing from the food web, and get them to hold the string like the arrows in the food chain.

Pick one living thing from the food web to change and ask that child to sit down.

Then get all the children with string linked to that living thing to sit down.

Get any children who have strings linking them to someone sitting down to also sit down.

Look at what happens to the food web if one thing changes or dies out.
