Teaching Through Nature

## European Shag

Shags are medium sized dark coastal birds (they are on average 65-80cm tall and have a wing span of 90-105cm). The most characteristic features of Shags are their tuft of black feathers that sticks up above the head and their beautiful emerald green eyes. You can often see them resting on rocks close to the shoreline, fishing in harbours and bays or flying low across the sea.
